193 **4 Document Introduction**

194	4.1 Summary of Contents of Document
195 196 197 198	This <i>ebXML Requirements Specification</i> represents the work of the ebXML <i>Requirements Project Team</i> . It defines ebXML and the ebXML effort, articulates business requirements for ebXML, and defines specific requirements that SHALL be addressed by the various ebXML project teams in preparing their deliverables.
199 200 201 202 203 204	The keywords MUST, MUST NOT, REQUIRED, SHALL, SHALL NOT, SHOULD, SHOULD NOT, RECOMMENDED, MAY, and OPTIONAL, when they appear in this document, are to be interpreted as described in Internet Engineering Task Force (IETF) Request For Comments (RFC) 2119. ¹
205	4.2 Audience
206	The target audiences for this document are:
207 208	 ebXML Project Teams, as a foundation for developing their technical specifications
209 210	 Other interested parties, as a means to convey the purpose, scope, and vision of ebXML

The ebXML vision is to deliver:

260

225	
226	
227	4.4 Documentation Conventions
228	The following highlighting is used for non-normative commentary in this document:
229	
230	[NOTE -]: General comments directed to all readers.
231	
232	5 General Introduction
233	Electronic Business Extensible Markup Language (ebXML) is an international initiative
234	established by the United Nations Centre for Trade Facilitation and Electronic Business
235	(UN/CEFACT) and the Organization for the Advancement of Structured Information
236	Standards (OASIS) with a mandate to undertake a 15-18 month program of work. As
237	identified in the ebXML Terms of Reference, the purpose of the ebXML initiative is to
238	research and identify the technical basis upon which the global implementation of XML
239	can be standardized. The goal is to provide an XML-based open technical framework to
240	enable XML to be utilized in a consistent and uniform manner for the exchange of
241	electronic business (eb) data in application to application, application to human, and
242	human to application environments—thus creating a single global electronic market. TM ¹
243	
244	ebXML is based on international standards and is itself intended to become an
245	international standard. A key aspect for the success of the ebXML initiative is adherence
246	to the use of the W3C suite of XML and related Web technical specifications to the
247	maximum extent practical. Although these specifications may not provide the optimal
248	technical solution, acceptance of ebXML by the business community and technical
249	community is tied to XML. However, certain key elements of the ebXML technical
250	framework may require adopting alternative technologies and technical specifications—
251	such as those of the Internet Engineering Task Force (IETF), International Organization
252	for Standardization (ISO), Institute of Electrical and Electronics Engineers (IEEE), International Electrotechnical Commission– (IEC), UN/CEFACT, OASIS, and the Object
253254	Management Group (OMG).
255	Wanagement Group (OWG).
256	[NOTE - ebXML operates under the procedures identified in the ebXML Terms of
257	Reference]
- •	
258	5.1 ebXML Vision and Scope
259	5.1.1 ebXML Vision

1 "creating a single global electronic market" is a trademark of the ebXML Working Group
ebXML Requirements Specification Page 7 of 38363713735

261 262 263 264	"A single set of internationally agreed upon technical specifications that consist of common XML semantics and related document structures to facilitate global trade."			
265 266 267 268	These ebXML technical specifications are intended to create a <i>Single Global Electronic Market</i> . TM To create this single global electronic market, this single set of ebXML technical specifications:			
269 270	♦ SHALL be fully compliant with W3C XML technical specifications holding a recommended status²			
271 272	 SHALL provide for interoperability within and between ebXML compliant trading partner applications 			
273274275	♦ SHALL maximize interoperability and efficiency while providing a transition path from accredited electronic data interchange (EDI) standards and developing XML business standards			
276 277	♦ SHALL be submitted to an appropriate internationally recognized accredited standards body for publication as an international standard			
278	5.1.2 ebXML Scope			
279 280 281 282 283 284	The ebXML initiative is targeted at every sector of the business community, from international conglomerate to small and medium sized enterprises engaged in business-to-business and business-to-consumer trade. With that audience in mind, the ebXML initiative is committed to developing and delivering specifications that will be used by all trading partners interested in maximizing XML interoperability within and across trading partner communities.			
285	5.2 ebXML Requirements Specification Purpose and Scope			
286 287	The <i>ebXML Requirements Specification</i> purpose and scope are defined in the following sub-sections.			
288	5.2.1 ebXML Requirements Specification Purpose			
289 290 291 292 293 294	This <i>Requirements Specification</i> has two primary purposes. The first of these is to provide clearly articulated requirements from representatives of international business and accredited standards organizations.— These requirements are intended to serve as a foundation for all other ebXML specifications and SHOULD assist the ebXML project team members in developing their deliverables in a consistent manner. This specification is also intended to convey to interested parties the purpose, scope, and vision of ebXML.			

295	5.2.2	ebXML Requirements Specification Scope
296 297 298 299	ebXM conse	bXML Requirements Specification applies to the work underway within the current L project teams. Each project team has provided input to this document to ensure usus with its contents. In addition to the Requirements Project Team, project teams atly chartered by the ebXML Steering Committee are:
300	•	Business Process
301	•	Technical Architecture
302	•	Core Components
303	•	Transport/Routing and Packaging
304	•	Registry and Repository
305	•	Trading Partner
306	•	Proof of Concept
307 308		lition, the following special management support teams are chartered by the IL Executive Committee:
309	•	Quality Review
310	—N	Tarketing Awareness
311	•	
312	5.3	General ebXML Principles
313 314		al ebXML principles to be followed in developing ebXML deliverables are to technical specifications that:
315	•	Enable simple, easy and ubiquitous electronic business through the use of XML
316 317	•	Use W3C XML technical specifications holding recommended status to the maximum extent practicable
318 319	•	Provide a global cross-industry open, interoperable standard for business-to-business and business-to-consumer trade
320 321	•	Coalesce the structure and content components of divergent XML initiatives into a single useable XML business standard

322 323 324	•	Provide impetus so that common resources currently engaged in short-term vertical solutions SHALL be marshaled to reach a common long-term, horizontal solution
325	•	Support vertical and horizontal segments of industry and business participants
326 327 328	•	Avoid proprietary solutions that impose financial or software requirements constraints on ebXML users to buy, install or programmatically support any ebXML unique software products in the conduct of business information exchange
329	•	Strive to minimize costs of doing business electronically
330	•	Provide multi-lingual support
331	•	Accommodate national and international trade requirements
332 333	•	Provide a migration path from accredited EDI and developing XML business standards
334 335	•	Apply when possible the simplification principles of SIMAC Business Requirements ³
336		

337

6 Business Requirements

- 338 This section describes the business requirements for business to be conducted 339 electronically. The business requirements identified in this section are oriented toward
- 340 using XML for electronic business, but most of the requirements are applicable to
- 341 implementation with other technologies as well.

342

- 343 The scope of the ebXML business requirements is to meet the needs for the business side
- 344 of both business-to-business (B2B) and business-to-consumer (B2C) activities. Consumer
- 345 requirements of the B2C model are beyond the scope of the ebXML technical
- 346 specifications. Application-to-application (A2A) exchanges within an enterprise may also
- be able to use the ebXML technical specifications, however ebXML A2A solutions 347
- 348 SHALL not be developed at the expense of simplified B2B and B2C solutions.

349 350

- NOTE for ease of reading, the term business is to be interpreted as interchangeable
- 351 with for-profit, non-profit, not-for profit, and government entities.]

352 353

- NOTE For the purposes of this document, Application-to-Application is defined as the
- 354 computer-to-computer exchange of business information without human intervention
- 355 both within and across enterprise boundaries.]

356

361

- 357 The business requirements to be addressed by the ebXML initiative are divided into nine
- 358 core areas - General Business, Electronic Business, Globalization, Openness,
- 359 Usability/Interoperability, Security, Legal, Digital Signatures, and Organizational. Each
- 360 of these requirements is identified in the following sections.

6.1 General Business Requirements

- 362 Business has a real need to use new technology with minimized investment to gain
- competitive advantage. The advent of the Internet and World Wide Web has proven to 363
- 364 offer such benefits. However, realizing these benefits requires a functionally neutral
- 365 standard method of exchanging data. Specifically, business needs a solution that
- 366 provides:
- 367 368
- A single, consistent, simple approach to using XML for electronic business processes in both the B2B and B2C environments
- 369 ♦ A process and recommendation for ebXML conformance
- 370 371
- Support for both vertical (e.g. industry, functional, organizational) and horizontal (e.g. cross-industry, multi-functional, organizationally neutral) solutions regardless
- 372 of the sophistication of the user

ebXML Requirements Specification

Page 11 of 38363713735

373374375	 Support for a range of implementations from basic, low cost solutions appropriate for Small and Medium Enterprise (SME) deployment, to comprehensive, complete implementations using all optional features appropriate to large enterprises 	
376 377	◆ A range of usage from using core features in ad hoc, informal exchanges to high formal, structured exchanges	ly
378	♦ A single consistent modeling language and methodology	
379 380	 Support for current business models and practices as well as new ones developed through business process modeling 	i
381 382	♦ A business process metamodel that supports individually developed business process models	
383 384	 Design rules for developing ebXML compliant XML documents that are based of approved W3C schema specifications 	n
385	♦ Syntactically neutral core components	
386 387	♦ XML syntax based boilerplate schemas and tags to support individual trading partner business processes that -	
388	- eliminate duplication of effort	
389	- provide support for XML metadata	
390	- clearly identify core, mandatory features, and optional features	
391	- provide a mechanism for full specification of semantic meaning	
392	♦ Fully interoperable transport, routing, and packaging solutions	
393	♦ Security solutions that meet business confidentiality requirements	
394 395	◆ A single recognized international standards organization to oversee continued ebXML work	
396	♦ An open development process with no barriers to entry	
397	♦ Open, readily accessible, perpetually free technical specifications and standards	
398	♦ A solution that minimizes costs for development, maintenance, and use	
399 400	[NOTE - Business looks to XML as a means of gaining competitive advantage through leveraging new technology. Minimizing the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of doing business electronically is a keep of the cost of the cost of the cost of the cost of doing business electronically is a keep of the cost o	
	ebXML Requirements Specification Page 12 of 393637137	35

- 401 element in achieving a competitive advantage. The cost of doing business electronically
- 402 can be grouped into acquisition, development, deployment and customization, integration
- with business applications, and operations and support. It is expected that using XML for
- 404 electronic business will be less costly than traditional forms of EDI and other existing
- electronic commerce technologies in each of these areas. This expected cost reduction is
- a driving force for considering XML over traditional EDI technologies.

6.2 Conducting Electronic Business using ebXML

- Business applications need to be able to exchange structured business documents
- 409 (encoded in XML) with a corresponding application of another enterprise to support a
- business process. This exchange may either be completely without human intervention,
- as is the case with traditional EDI, or with some level of human intervention to correct
- 412 missing or erroneous data.— Business applications may also need to exchange structured
- 413 business documents with intermediaries such as portals and brokers. Because a majority
- of businesses do not have sophisticated IT architectures, business applications will need
- 415 to exchange structured business documents with trading partners who will be limited to
- viewing and manually processing both inbound and outbound transactions. Business
- 417 applications also require information exchange mechanisms that provide for the exchange
- of pure XML payloads but may also support plug-and-play, shrink-wrapped,
- 419 syntactically-neutral solutions.

407

430

- 420 Additionally, business applications may also need to:
- ◆ Be able to generate business documents encoded in XML and other syntax
- structures that can be used in traditional computer to computer exchanges as well
- as being displayed using an associated style sheet keyed to a specific presentation
- format; such as the appropriate U.N. Layout Key for Trade Documents or a trading partner specified format.⁴
- ◆ Enable data entry of business documents using a specified presentation format;
- such as the appropriate U.N. Layout Key for Trade Documents or a trading partner
- 428 specified format. The data entry SHALL result in an ebXML compliant encoded
- document representing the business information.

6.3 Globalization

- 431 Global solutions are critical in today's ever expanding marketplace. The underlying
- purpose of ebXML is to facilitate international trade. To achieve "a single global"
- 433 *electronic market*" that such facilitation implies, it is critical to simplify existing
- 434 exchange standards methodologies and harmonize divergent approaches. This
- 435 simplification and harmonization can be achieved through developing a business
- 436 metamodel in conjunction with syntax neutral core components. Both of these
- deliverables SHALL accommodate divergent national and multi-national process

ebXML Requirements Specification

Page 13 of 39363713735

requirements, and SHOULD support backward compatibility with the developing ebXML technical framework.

440

- To simplify development efforts, all work SHALL use English. To support globalization,
- all ebXML technical specifications SHALL be translatable into other natural languages.
- 443 Translation into other natural languages is the responsibility of the intended user,
- although such translations SHOULD be supported in the ebXML repository. Regardless
- of language, and in keeping with the requirements of W3C XML 1.0, all work SHALL be
- compliant with Unicode and ISO/IEC 10646 for characters, IETF RFC 1766 for language
- identification tags, ISO 639 for language name codes, and ISO 3166 for country name
- 448 codes. 5,6,7,8,9,10,11,12

449 **6.3.1 Openness**

- Openness is a critical aspect of ebXML. Business requires the ability to easily access
- ebXML technical specifications without regard to "membership", or payment of access
- and/or use fees. ebXML technical specifications SHALL be completely open to all
- 453 potential users so as to eliminate the barriers for entry. Openness requires several key
- components to ensure viability. Chief among these is an open, easily accessible registry
- and repository for the ebXML technical specifications.

6.3.2 Registry and Repository

- A registry is required to allow process owners to submit, classify, register and update
- 458 mapping templates, business process specifications, and data interchange specifications.
- This registry MUST have an interface that supports access by humans as well as
- computer applications. This registry MUST support an agreed upon security protocol.

461

456

- A repository is required for storage and retrieval of various items that support performing
- business electronically.— There are two distinct sets of business requirements on the
- repository: a set dealing with managing the workflow of developing standard components
- 465 that are stored in the repository, and a set dealing with application usage of the
- 466 repository. Additionally, the repository MUST support the information needs of the
- ebXML work group and project teams, as well as ebXML technical specification users
- with respect to glossaries and products.

469

- 470 [NOTE A registry is a mechanism whereby relevant documents and metadata about
- 471 them can be registered such that a pointer to their location, and all their metadata, can be
- 472 retrieved as the result of a query. A repository is a location or a set of distributed
- 473 locations where documents pointed at by the registry reside and from which they can be
- 474 retrieved by conventional (http / ftp) means, perhaps with additional
- authentication/permission layers.

476

- The ebXML Registry and Repository SHALL support the concept of a network of
- 478 registries and repositories that can intercommunicate via the interfaces specified by the

ebXML Requirements Specification

Page 14 of <u>393637137</u>35

- 479 ebXML Registry and Repository Project Team. A registry can be established by an
- 480 industry group or standards organization and can intercommunicate with any number of
- repositories. In addition, content with a repository can reference content within another
- repository. The concept of a single repository is not scalable, nor does it promote the idea
- of a global web.

- 485 If ebXML is to exist beyond its initial 18-month timeframe, then ebXML SHOULD
- 486 maintain responsibility for ebXML technical specifications, ebXML work group
- deliverables, and ebXML glossaries in an ebXML-supported repository. However, if the
- decision is made that ebXML will not exist after the initial set of deliverables, or that
- 489 ebXML will not maintain or support its own repository, then ebXML MUST determine if
- 490 repository oversight responsibilities for ebXML technical specifications SHOULD
- 491 transition to UN/CEFACT, OASIS, or some other existing XML business standards
- 492 organization or consortium.

493 **6.4 Usability/Interoperability**

- 494 Usability and interoperability of the ebXML technical framework are critical business
- requirements. Components of usability and interoperability are architecture; transport,
- 496 routing, and packaging; extensibility; and leveraging existing technology. Each of these
- is addressed in the following sub-sections.

498 **6.4.1 Architecture**

- This is a primary requirement of the ebXML initiative. To maximize interoperability, the
- 500 ebXML architecture SHOULD support
- Tommon Business Processes Both entities involved in the exchange of data ♦ Common Business Processes Both entities involved in the exchange of data
- MUST be engaged in executing the same transaction in the context of a business
- 503 process
- 504 ◆ Common Semantics Common meaning, as distinct from words, expression, or
- 505 presentation
- 506 ♦ Common Vocabulary A direct correspondence between words and meaning
- 507 ◆ Common Character Encoding
- 508 NOTE UNICODE, which is specified in the W3C XML Version 1.0 technical
- specification, provides this.]
- The state of the
- common usage of those attributes, common approach to document structure
- 512 ◆ Common Security Implementations

ebXML Requirements Specification

Page 15 of 39363713735

513	◆ Common Data Transfer Protocol
514	◆ Common Network Layer
515 516 517 518 519 520 521	[NOTE - As with other non-functional requirements, some aspects of achieving interoperability may conflict with other non-functional requirements.—Where a requirement is not met, software can usually be developed to provide a bridge. However such bridges may increase costs of development, implementation, or both, and conflict with cost minimization. In other cases, achieving interoperability enhances other requirements. For example, maximizing interoperability helps to achieve platform independence.]
522	6.4.2 Transport, Routing, and Packaging
523 524 525 526 527 528	Any exchange of business information requires fully described transport, routing, and packaging methodologies. These descriptions MUST be based on a program language definition independent of the service interface required for systems to control the messaging system for the purpose of sending and receiving messages. These descriptions SHOULD identify the behavior of the messaging system required to:
529 530	 Realize reliable secure sending and receiving of messages over any network capable of carrying XML
531	• Support syntax-neutral definition of the information that needs to be retained
532 533	• Detail the format and structure of the wrapper, header, and any other data within the message - to include signatures and encryption
534 535	 Query ebXML servers (such as ebXML compliant message handling systems or registries) for the services they support
536	6.4.3 Extensibility
537 538 539 540 541 542 543	Businesses seek solutions that provide for a certain level of customization beyond core standards. This extensibility is necessary to ensure internally unique business process requirements can be addressed beyond the scope of standards used for information exchanges between businesses. One example of this requirement is customization beyon core standards to support exchanges within an enterprise. Another is customization to support application/database to human exchanges. ebXML MUST ensure extensibility is facilitated while ensuring conformance with core standards.
544	6.4.4 Leveraging Existing Technology
545 546 547	Leveraging existing technology encompasses both the ability to inter-operate with existing technology as well as the ability to migrate to the new technology. Each of these is discussed in the following sub-sections.
	ebXML Requirements Specification Page 16 of 39 36371373

6.4.4.1 Compatibility with existing Technology and EB standards and practices

- Businesses already have in place extensive EDI architectures and business solutions
- based on accredited EDI standards; and customized sub-sets in the form of
- implementation conventions based on those standards. Additionally, many businesses are
- implementing XML solutions that are based on the technical specifications issued by the
- World Wide Web Consortium (W3C) and the XML-based business standards of various
- competing XML groups—such as RosettaNet, BizTalk, XML.ORG, the Open
- Applications Group (OAG). Although the ebXML solution will facilitate a single global
- electronic market, and although its technical framework will provide a single set of
- technical specifications, businesses will still require the ability to inter-operate their
- existing EDI and XML solutions with solutions built on the ebXML framework.

559

548

- As part of compatibility, businesses require a technical framework that reuses common
- elements regardless of syntax. To ensure a syntax neutral solution, ebXML MUST
- identify and define those items considered common across XML business data
- 563 exchanges. Common items are semantic units at any level that stay consistent across
- contexts, and therefore are reusable both within and between business exchange
- 565 messages. Business process models will help define common items and provide their
- 566 context. This context will in turn define the precise use of common items in messages
- exchanged among parties. ebXML MUST describe these items in terms that are
- independent of implementation syntax. This syntax neutral approach will enable their
- reuse for not only XML documents, but other syntax-based transactions as well.

570

579

- 571 The ebXML technical framework MUST adopt—or if needed, develop—a methodology
- 572 to consistently build or derive core components, including methods to encourage reuse
- and provide for extensions. ebXML MUST identify element names that can apply across
- 574 business processes and contexts yet still allow for translation into leading spoken
- languages. All ebXML work SHALL generate the content of core components
- 576 independent of implementation syntax, but with references to data structures in XML
- 577 messages and EDI transactions. The ebXML solution SHALL identify attributes that
- describe the context of the components also in terms independent of syntax.

6.4.4.2 Migration from existing EDI and XML solutions

- Businesses seek maximum interoperability between their applications and trading partner
- applications. This can be achieved by a single way of doing business electronically, i.e., a
- single standard for using XML for electronic business. However, many businesses also
- have a considerable investment in existing standards-based EDI and emerging XML
- business approaches. These businesses require a mechanism and migration path for
- accommodating legacy EDI solutions based on accredited standards and XML solutions
- already in progress or implemented. Although migration from existing EDI and XML
- solutions is a key element of ebXML, the ebXML solution will ensure maximizing
- interoperability takes precedence in developing the ebXML technical specifications.

589

ebXML Requirements Specification

Page 17 of 39363713735

590 591 592	[NOTE - It is beyond the current scope of the ebXML initiative to develop specific migration and transformation methods to include mapping services, communication channels, and architecture support from traditional EDI architectures.]	
593	6.5 Security	
594		
595 596 597 598 599 600 601 602 603	Businesses have a high level requirement that appropriate security technology be applied to protect information involved in business processes. Aspects of security may be required at various layers of a business process; at an outsourcing/transaction layer, at a session layer (i.e., for the duration of a network session in which data is exchanged) or applied to a single, stand-alone document instance. In addition, application of security to a particular exchange or document instance MUST be determined by the business needs, and allow unrestricted and unsecured interchanges if the business process requires this. All, some, or no security features may be required in any particular exchange of business information. The following requirements are general security definitions:	
604	♦ Confidentiality - Only sender and receiver can interpret document contents	
605	♦ Authentication of sender - Assurance of the sender's identity	
606	♦ Authentication of receiver - Assurance of the receiver's identity	
607	♦ Integrity - Assurance that the message contents have not been altered	
608	♦ Non-repudiation of Origin - The sender can not deny having sent the message	
609 610	 Non-repudiation of Receipt - The receiver can not deny having received the message 	
611	◆ Archiving - It MUST be possible to reconstruct the semantic intent of	
612	—a document several years after the creation of the document	
613	<u>•</u>	
614 615 616 617 618 619 620 621 622	The understanding of these security requirements is also subject to the following related requirements; Legal, Digital Signatures, Interoperability, and Third Party Trust relationships. For example; The Archiving, Authentication, and Non-Repudiation of Origin and Receipt may be performed by a trusted third party through which the Parties to a transaction agree to channel transaction messages in order to provide independent historical proof that the transaction took place at a specific time and on specific terms. This time period is subject to the archiving and record retention requirements of particular situations. In general, businesses might require archiving and retrieval of up to 30 years after document creation.	
	ehXML Requirements Specification Page 18 of 39363713735	

6.5.1 Legal

- 625 Beyond the security requirements identified in section 6.5, the following additional legal 626 requirements exist:
- 627 Comply with the requirements of UN/CEFACT recommendation 14 -Authentication of Trade Documents by Means Other Than Signature $^{1\theta \underline{3}}$ 628
- 629 Provide versioning support to facilitate reconstructing the semantic meaning of 630 transactions in accordance with the underlying transaction format used
- 631 Ensure full audit capability is supported
- 632 Ensure all transmitted data is well defined by a minimal set of metadata
- 633 Ensure a mechanism provides for identifying completeness of a transaction

6.5.2 Digital Signatures

agreement.

- 635 Digital signatures, or electronic signatures, have security and legal implications that
- 636 directly impact on affect electronic business requirements. As more and more government
- 637 bodies define digital signatures, and enact legislation that adopts such techniques as
- 638 having the same force of law as traditional signatures, new technology solutions MUST
- 639 accommodate these business requirements.

640 641

642

634

The following definition and statement of compliance requirements is taken from Article 6 of UN Commission on International Trade Law, Working Group on Electronic

(1) Where the law requires a signature of a person, that requirement is met in

communicated, in light of all the circumstances, including any relevant

relation to a data message if an electronic signature is used which is as reliable

as was appropriate for the purpose for which the data message was generated or

- Commerce, Draft Guide to Enactment of the UNCITRAL Model Law on Electronic 643 Signatures (A/CN.9/WG.IV/WP.88):
- 644

645 646

- 647
- 648 649
- 650 651
- 652
- 653 654
- 655 656
- 657 658
- (2) Paragraph (1) applies whether the requirement referred to therein is in the form of an obligation or whether the law simply provides consequences for the absence of a signature.
- (3) An electronic signature is considered to be reliable for the purpose of satisfying the requirement referred to in paragraph (1) if:

ebXML Requirements Specification

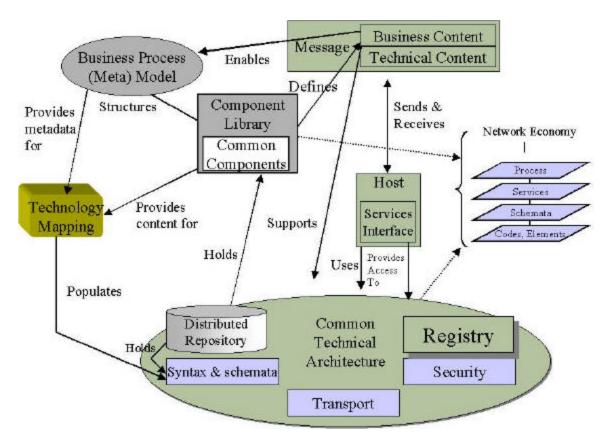

Page 19 of 39363713735

659	(a) the signature creation data are, within the context in which they are used,
660	linked to the signatory and to no other person;
661	
662	(b) the signature creation data were, at the time of signing, under the control
663	of the signatory and of no other person
664	
665	(c) any alteration to the electronic signature, made after the time of signing,
666	is detectable; and
667	
668	(d) where a purpose of the legal requirement for a signature is to provide
669	assurance as to the integrity of the information to which it relates, any
670	alteration made to that information after the time of signing is detectable.
671	
672	The ebXML technical framework MUST support electronic transactions that provide for
673	electronic signatures at an appropriate level within the transaction to meet requirements
674	of both the sender and receiver in keeping with the forgoing definition and attributes.
675	6.6 Management
676	If ebXML is to be successful in both the short and long term, and if the ebXML technical
677	framework is to be adopted by the international business community, then management
678	issues associated with both organizational structure and participation MUST be
679	and dressed. The following sub-sections identify the business requirements for each of
680	these areas.
681	6.6.1 Organizational Structure
682	The ebXML initiative is an eighteen month effort to develop a technical framework. To
683	ensure efficiency of operation and success in achieving the ebXML vision, sufficient
684	organizational controls MUST be put in-place as quickly as possible. Further, there exists
685	the possibility that ebXML will become more than a short term initiative. As such, long-
686	term requirements for managing ebXML MUST be defined and addressed in the near
687	term to ensure a smooth transition from short_ to longterm management. Further, if such
688	a long-term organization becomes reality, processes MUST be adopted for recasting
689	ebXML as an internationally accredited standards body.
690	6.6.2 Participation
691	The ebXML initiative relies heavily on technical expert participation. This participation
692	MUST be free of organizational requirements that restrict or otherwise inhibit
693	participation of anyone. Further, participation SHOULD be limited to the individual and
694	not at the organizational level. This will ensure each technical expert is given an equal
695	footing in the organization, management, and work effort of ebXML.
696	

ebXML Technical Framework Requirements

This section identifies specific requirements for achieving the ebXML technical framework through the work of each of the ebXML project teams. These requirements have been developed in close coordination with those project teams to ensure consensus on their content. These high level requirements are closely aligned with the business requirements in section two of this document and are consistent with the vision, purpose, scope and guiding principles contained in Section Five. These high level requirements are carefully designed to provide a road map for the respective project teams as they drill down to more detailed requirements in preparation for developing their ebXML deliverables. As each of these deliverables becomes a reality, they will contribute to the developing ebXML technical specifications as part of building the ebXML technical framework as illustrated in Figure 73-1.

Figure 73-1 ebXML Technical Framework

7.1 General Requirements

- The following general requirements, in conjunction with the business requirements stated
- in Section Six, apply to each project team. Deliverables for each of the project teams
- 714 MUST -

- Meet the business needs articulated in Section Two
- 718 ♦ Be fully compliant with approved ebXML technical specifications
- 719 ♦ Clearly identify core, mandatory features, and optional features
- 720 ♦ Clearly define conformance requirements
- Support the requirements of each project team as identified in the following subsections.

723	7.2 Requirements
724 725	The Requirements Project Team's initial task was to produce this ebXML Requirements Specification. In addition, the Requirements Project Team SHALL:
726 727 728	◆ Develop follow-on requirements documents in support of the ebXML Executive Committee and ebXML Steering Committee that meet the requirements contained in section 4 of this document
729 730	 Review, evaluate, and assimilate follow-on requirements submitted by external organizations for consideration by ebXML
731 732	◆ Provide assistance as required to the <i>Quality Review Team</i> on ebXML requirements issues to include at a minimum a requirements traceability matrix
733	7.3 Business Process
734 735	The Business Process Project Team detailed requirements and deliverables SHALL:
736 737 738 739	 Provide a technical specification for business process definition (BPDS), enabling an organization to express its business processes so that they are understandable by other organizations, thereby enabling integration of business processes (See for example eCo strategic framework - services and interactions)
740 741	 Provide an explicitly specified process metamodel that is not merely implied by instantiations or derivations
742 743	- the metamodel SHALL provide set of rules to define the business processes—rules, semantics and syntax
744	◆ Provide a BPDS that is usable -
745	- globally
746	- cross-industry
747	- by small, medium, and large organizations
748	- by for-profit, government, and non-profit organizations
749 750	 Provide a BPDS that enables an organization to express its business processes to such an extent that other organizations can discover -
751	- the kind of organization the process belongs to
752	- the business processes belonging to an organization ebXML Requirements Specification Page 23 of 39363713735

753 - the interaction points in the organization's business process in order to determine whether and how to engage in business 754 755 - the kinds of information exchanges required to conduct a particular interaction in 756 the business process 757 - company interactions, and services and categorizations of them 758 Provide for BPDS compatibility by -759 - allowing for forward migration from existing frameworks to the degree possible 760 - carrying forward accumulated best of breed experience such as—OAG, RosettaNet, HL7—into the ebXML "superset" 761 762 enabling mapability between content provider defined processes 763 enabling organizations or industry verticals to be able to compare business 764 processes 765 Provide for BPDS re-usability/extensibility by -766 allowing a company to 're-use' and extend standard, template, or actual business processes as starting points for definition of specific business processes 767 768 - encouraging industry verticals to base their model on the high level framework 769 supporting re-usable data components 770 - supporting re-usable process components 771 Enable business processes to be accessible and readable by -772 - making BPDS-based processes machine readable 773 expressing processes defined under BPDS in parsable, navigable XML 774 - making processes defined under BPDS visually (diagrammatically) viewable 775 identifying at least one industry standard based tool or technique, through which 776 BPDS compliant processes can be defined through diagrammatic drawing 777 Provide a process to create and maintain a -778 NOTE - this process SHALL be developed in coordination with the *Core Components Project Team's* developing process for identifying core components.] 779 Page 24 of 39363713735

785		library of documents based on identified services and interactions
786		web site for ready access to glossaries
787 788 789	•	Be developed in conjunction with the <i>Registry and Repository Project Team</i> to incorporate technical specifications, models, and required glossaries into the ebXML repository
790	7.4	Technical Architecture
791 792 793	The T SHAI	Technical Architecture Project Team detailed requirements and deliverables LL:
794 795	•	Provide a view for integration of business processes among ad-hoc or established independent business partners by electronic means
796 797	•	Reduce the need for collaborative business partners to have individual and expensive prior agreement on how to integrate business processes
798	•	Provide a high-level business-centric view of distributed e-business processes
799 800 801 802	•	Specify the roles, interactions, and interfaces among the various ebXML specification components such as—the business process metamodel, core components, registry and repository, message handling, and collaboration profiles and agreements.
803 804	•	Allow for both business processes and enabling technologies to evolve independently while retaining long-term investments in both
805	•	Integrate with new and legacy systems throughout the enterprise
806	•	Leverage existing technologies and standards
807 808 809	•	In coordination with BP process specification and core components identification, provide for naming conventions for technical and business content in the technical architecture

811	7.5 Core Components	
812	The Core Components Project Team detailed requirements and deliverables SHALL:	
813	♦ Be developed in conjunction with the <i>Business Process Project Team</i>	
814 815	 Identify a methodology for describing core components within the framework of the Business Process metamodel 	
816	♦ Define core component content and structure	
817	◆ Support "re-use" and extensibility	
818	♦ Provide methodology and examples for XML and EDI instantiation	
819	• Enable creation of XML business standards	
820	The Core Components Project Team SHALL develop core components that SHALL:	
821	♦ Be syntax independent	
822 823	[NOTE - Core components SHALL not be specifically aligned with any existing syntax based semantics such as ANSI ASC X12 or UN/EDIFACT]	
824 825	 Be defined to ensure separation of common core components versus new extensions 	
826	♦ Incorporate where appropriate ISO/IEC 11179 rules ^{14, 15,16,17,18,194}	
827 828	 Use semantics solutions that accommodate currently defined accredited EDI semantics where they add value 	
829	♦ Use a single consistent set of terminology	
830	 Support context sensitive core components 	
831	7.6 Transport/Routing and Packaging	
832 833	The <i>Transport/Routing and Packaging Project Team</i> detailed requirements and deliverables SHALL:	
834	 Specify how to envelope business documents in regard to - 	
835	- related messages in a collection	
	ebXML Requirements Specification Page 26 of 39363713735	1

Provide design guidelines for ebXML compliant messages

836	- physical and/or logical addressing of destination for messages
837	• Specify exchange at the application level
838	◆ Provide for flexible transaction boundaries
839	◆ Provide for reliable messaging and error handling
840	♦ Identify messaging routing
841	♦ Meet security requirements
842	◆ Provide for audit trails
843	◆ Define and meet acceptable levels of quality of service
844	• Support platform independent interoperability
845	Support restart and recovery
846 847	[NOTE - for additional technical details, see the Transport, Routing, and Packaging detail requirements specification.]
848	7.7 Registry and Repository
849 850	The Registry and Repository Project Team detailed requirements and deliverables SHALL develop detailed blueprints for an ebXML Registry that:
851	 Uses an open management processes
852	 Has open and perpetually free access
853	♦ Supports technical specification submission and management
854	—Supports required system services
855	<u>•</u>
856	7.7.1 7.7.1 Technical Specification Submission and management
857 858 859	The registry and repository specifications SHALL address:
860	♦ Technical specification storage and retrieval for development and run-time views
861	♦ Object Storage - the ability to store objects in their original form, not limited to - ebXML Requirements Specification Page 27 of 39363713735

862	
863	- ebXML CPP/CPA/Business Process Schema
864	- classification schemes
865	- code lists
866 867	 related data, example instances of document definitions, executable code, style sheets
868	- relationships between objects, e.g., storage of semantically equivalent objects
869	
870	♦ A flexible life cycle management, e.g., deprecation and removal
871	♦ Support for a role-based security model
872 873	 Support for work request submissions to store associated supporting materials in any electronic format, e.g., PowerPoint documents, audio files, images
874	-Indexing of metadata across all entries in Registry
875	<u>◆</u>
876	7.7.2 Required System Services
877 878 879	The Registry and Repository specifications SHALL address the following required services.
880 881	 Query services the ability to send a request and retrieve results from a physical storage mechanism, e.g., exact or similar matches and navigation
882	♦ Logging services the ability to store transactional events, query events, and metrics
883	
884	-SHALLSHALL
885	7.8 Trading Partner
886 887	The Trading Partner Project Team detailed requirements and deliverables SHALL:

Page 28 of 40363713735

888 Define a collaboration-protocol profile (CPP) by which a party can be found 889 through a discovery process. The profile indicates what kind of electronic 890 business-to-business interactions the party is capable of conducting.— The CPP 891 defines the technical components of the interactions, such as supported 892 communication profiles, security information, general messaging specifications, 893 and the definition of the collaborative processes that the party supports in 894 interactions with other parties. Multiple profiles for specific processes, locations, 895 individuals, and systems can exist within a single organization. 896 897 [NOTE: The discovery process itself as a business process that is not within the scope of 898 the Trading-Partner team.] 899 900 Define a collaboration-protocol agreement (CPA), which records agreement 901 between two parties on how to do electronic business with each other. The CPA 902 can be viewed as the intersection of the two parties' CPPs. It defines the common 903 technical capabilities and the particular services that each provides to the other. 904 [NOTE: It is a long-term goal to extend the CPA to define multiparty interactions.] 905 906 Define the content of the CPP such that a software process can compose a CPA 907 from the CPPs of the two parties. 908 Define the CPA such that it serves the purpose of a configuration document that 909 can be used to configure the two parties' run-time systems to perform the desired 910 business. 911 Work with the Transport-Routing-Packaging team to ensure that the CPP/CPA 912 provides the needed support for message exchanges and that the message header 913 provides the fields needed to support electronic business under control of a CPA. 914 Define the collaborative processes that the party can engage in with another party 915 based on the ebXML model for the business process. Elements of the definition 916 include: 917 — The requests that can be sent to the party

— The business document schema for each request

— The choreography of the message exchanges

— The response messages that can be sent as a result of each request

918

919

921	7.9 Proof of Concept
922 923 924	The <i>Proof of Concept Project Team</i> detailed requirements and deliverables SHALL facilitate developing prototype demonstrations for ebXML technical specifications. These prototype demonstrations SHALL:
925 926	 demonstrate Demonstrate feasibility and interoperability of each of the ebXML technical specifications within a business domain
927	◆ <u>Ddemonstrate viability of overall ebXML technical framework</u>
928	

928	
929	8 ebXML Organizational and Procedural Requirements
930 931 932 933	The ebXML Executive Committee MUST put in place organizational and procedural processes as soon as possible. These organizational and procedural processes are critical to enable the various ebXML project teams to make sound decisions in developing their requirements and deliverables. These organizational and procedural processes MUST:
934 935	◆ Facilitate the efforts of the <i>Requirements Project Team</i> and the various Executive Committee support teams identified in Section Seven.
936	◆ Support each of the functional project teams to meet their requirements
937 938	In developing these organizational and procedural processes, the Executive Committee SHALL:
939	♦ Follow the purpose, scope, and guiding principles identified in Section Five
940	♦ Meet the business needs articulated in Section Six
941	♦ Facilitate the general requirements in Section Seven
942	♦ Support the requirements of each project team as identified in Section Seven
943	These organizational and procedural processes MUST provide for
944	♦ An open and consensus driven ebXML management process
945	♦ An open, timely, and consensus driven ebXML products development process that
946	- is responsive to business needs
947	- has sufficient controls to prevent creation of equivalent components
948 949	♦ An open, timely, and consensus-driven ebXML technical specifications approval process that is responsive to business needs
950 951	Additionally, the Executive and Steering Committees, in conjunction with the full ebXML Working Group MUST determine:
952	♦ The requirements for short- and long-term ebXML relationships with

953

Page 31 of 40363713735

UN/CEFACT, W3C, ANSI, ISO and other standards bodies

954 955	• The requirements for short- and long-term ebXML relationships with OASIS, BizTalk, RosettaNet, OAG, and other XML business standards bodies	
956 957	◆ A common ebXML technical specification template to be utilized by each of t project teams in developing their technical specifications	he
958 959	♦ The appropriateness of moving ebXML technical specifications to recognized international standards under the cognizance of an international standards body	
960 961 962	◆ The single body that is responsible for long term maintenance of the ebXML technical specifications, repository, and supporting mechanisms - OASIS, UN/CEFACT, or ebXML	
963	♦ The process for long term maintenance of the ebXML technical specifications	
964	• ebXML funding methodology	
965	♦ The need for and definition of measures of success	
966	8.1 Executive Committee Support	
967 968 969	To help meet the requirements identified above, the Executive Committee has established Executive Committee support teams.—The requirements for these support team contained in the following subsections.	
970	8.1.1 Quality Review	
971 972 973	The <i>Quality Review Team</i> SHALL review all candidate technical specifications prior each public review period and final vote and SHALL identify via clear, concise writt documentation:	
974	♦ Deviations from the overall requirements specifications	
975	◆ Deviations from the ebXML traceability matrix	
976	♦ Completeness	
977	◆ Technical consistency within the overall ebXML technical framework.	
978 979	 Proposed solutions to identified problems or gaps where deemed appropriate to the QR team 	у
980 981	The <i>Quality Review Team</i> SHALL consider the following features of the candidate material:	;
982	◆ Scope and alignment with ebXML vision	
	ebXML Requirements Specification Page 32 of 4136371	<u>37</u> 35

983	◆ Completeness
984	◆ Satisfies ebXML requirements
985	◆ Consistency with Technical Architecture
986	 Consistency with component naming rules
987	♦ Addresses Security Risk Assessment document
988	♦ Editorial quality, that is
989	- uses ebXML template
990	- adheres to the ebXML documentation style guidelines
991	- uses consistent language (glossary)
992	- uses correct grammar
993	- uses correct spelling
994	- avoids unsubstantiated rhetoric
995	- contains no logical inconsistencies
996	- contains no 'placeholders' for future content
997	- provides adequate exposition and clarity of meaning
998	- uses appropriate diagrams, examples and sample source code
999	- maintains a structural integrity
1000	- avoids ambiguity
1001 1002	In addition, the Quality Review Team SHALL be responsible for project management support to include:
1003	• Capturing the deliverables from the project teams
1004 1005	 Using the deliverable information to create and maintain a project plan that identifies the critical milestones and deliverables of the ebXML initiative
1006 1007	• Facilitating visibility to all ebXML project teams of the relationships between the critical ebXML deliverables

Page 33 of 41363713735

1008 1009	 Providing risk assessment analysis for the Executive Committee on any critical area that may impact meeting the ebXML timeline 	
1010	8.1.2 Marketing Awareness	
1011 1012 1013	The true measure of success for ebXML will be in its adoption by the business community. To help facilitate that adoption, the <i>Marketing Awareness Support Team</i> SHALL:	
1014	◆ Create an ebXML awareness program	
1015	◆ Define general ebXML web site content and management approaches	
1016	◆ Define allowable content of ebXML Project Team public pages	
1017	◆ Define and execute ebXML marketing communications	
1018	◆ Promote and support regional ebXML promotion efforts	
1019		
1020		
1021		

1021	
1022	9_ebXML Project Team Deliverables
1023 1024 1025 1026 1027	This section identifies the major specifications that SHALL be delivered by each of the ebXML project teams. It also describes in general terms the expected nature of the various ebXML project team deliverables to guide each team in developing those deliverables and ensure a single consistent approach.
1028	9.1 Major ebXML Technical Specifications
1029 1030	The major ebXML technical specifications to be delivered SHALL consist of the:
1031 1032	◆ Technical Architecture Specification - contains an overview of the technical infrastructure that comprises ebXML and itemize the design rules and guidelines
1033 1034	 Repository and Registry Specification - includes functional specification and technical design, interfaces, services
1035 1036 1037 1038	◆ Transport, Routing and Packaging Specification - addresses transport of ebXML messages, the means of security employed, and the physical construction of the messaging used within the scope of the ebXML system. Specific deliverables SHALL include -
1039	- message structure specification
1040	- message header specification
1041	- a textual API example
1042	- choreographic of messages
1043	- security specification
1044 1045	 Business Process Modeling Specification - the business process metamodel and the recommended methodology for using it
1046 1047	 Core Components Specification - The set of ebXML core components and the prescribed methodology for deriving them
1048 1049	 Trading Partner Specification - A collaboration profile template that supports manual and electronic discovery and agreement

Page 35 of 41363713735

1050	To assist in visualizing the above, Figure 9-1 is a conceptual model of overall ebXML
1051	stack interactions.
