

creativecommons RSS Module¹

Mon, Dec 16, 2002; by Dave Winer.

A RSS module that adds an element at the <channel> or <item> level that specifies which Creative Commons license applies.

Status

Deployable.

Change Notes

04/13/03 by DW -- Supported by Manila.

12/18/02 by DW -- Removed caveat, changed the status to Deployable.

12/17/02 by DW -- Notes.

12/16/02 by DW -- Created.

Description

One element is defined.

license -- if present as a sub-element of <channel>, indicates that the content of the RSS file is available under a license, indicated by a URL, which is the value of the license element. A list of some licenses that may be used in this context is on the Creative Commons website on this page, however the <license> element may point to licenses not authored by Creative Commons.

You may also use the <license> element as a sub-element of <item>. When used this way it applies only to the content of that item. If an item has a license, and the channel does too, the license on the item applies, i.e. the inner license overrides the outer one.

Multiple <license> elements are allowed, in either context, indicating that the content is available under multiple licenses.

Namespace declaration

```
xmlns:creativecommons="http://backend.userland.com/creativecommonsRssMo
```

¹ From <http://www.creativecommons.org/licenses/> and <http://www.creativecommons.org/licenses/by-nd-nc/1.0/>

dule"

Example

Here's a file that illustrates the use of the <license> element. [See Appendix A]

License

This work is licensed under a Creative Commons License.

A. creativeCommons change notes²

Tue, Dec 17, 2002; by Dave Winer.

12/18/02 by DW

Removed caveat, changed status to Deployable.

12/17/02 by DW

1. Changed the name used in the example to creativeCommons to solve a problem a problem with validation, per a discussion with Matthew Gifford and Sam Ruby. The new name of the module used in the example is creativeCommons. It now validates.

2. Rahul Dave suggests that licenses other than those provided by Creative Commons be permitted. I changed the language here to allow that.

3. Ravi Nanavati suggests that multiple license elements be allowed. Added language

4. This the last call for comments.

12/16/02 by DW

B. Creative Commons Licenses

The following are all eleven license choices available from our choose a license application. They are shown by name along the license characteristics that accompany them.

Name	Characteristics
Attribution	
Attribution-NoDerivs	 
<u>Attribution-NoDerivs-NonCommercial</u>	  
<u>Attribution-NonCommercial</u>	 
Attribution-NonCommercial-ShareAlike	  
Attribution-ShareAlike	 
NoDerivs	
NoDerivs-NonCommercial	 
NonCommercial	
NonCommercial-ShareAlike	 

Key License Terms:

Attribution. The licensor permits others to copy, distribute, display, and perform the work. In return, licensees must give the original author credit.

Noncommercial. The licensor permits others to copy, distribute, display, and perform the work. In return, licensees may not use the work for commercial purposes -- unless they get the licensor's permission.

No Derivative Works. The licensor permits others to copy, distribute, display and perform only unaltered copies of the work -- not derivative works based on it.

C. Example File³

  <description><a
    href="http://www.creativecommons.org/"></a>This
    morning Creative Commons opened up a formerly
    private part of their site containing enumerations of
    the different <a
    href="http://www.creativecommons.org/licenses/"
    >licenses they support</a>. It's very simple. A
    document, a weblog, a RSS file, a PDF or whatever,
    can specify which license applies. On the CC site, they
    tell you how to do it with RDF, but I'm interested in a
```

³ <http://static.userland.com/gems/backend/rssCreativeCommonsExample.xml>

solution that can be used in RSS 2.0 files, so we can in turn add a user interface to Rado and Manila (and others can do it for other authoring tools) that tie into the CC system. I totally support the idea of lawyers helping creative people instead of imprisoning us, but I can't convert everything I do to RDF to do that. Tonight is their launch. I'm toing it. If we can get a namespace defined and vetted today, I can announce our support tonight. An [Internet -Time](http://www.google.com/search?hl=en&lr=&ie=UTF-8&oe=UTF-8&safe=off&q=%22on+internet+time%22) solution to remind us we used to have a Can-Do attitude.
